

SP6035

High Performance Synchronous Rectifying Converter

DESCRIPTION

SP6035 is a high performance and tightly integrated secondary side synchronous rectifying converter for switching mode power supply system. It combines a low R_{dson} N-channel MOSFET to emulate the traditional diode rectifier at the secondary side of Flyback converter, The fundamental of SP6035 synchronous rectifying (SR) converter is based on our U.S. patented methods that utilize the principle of “prediction” logic circuit. The IC deliberates previous cycle timing to control the SR in present cycle by “predictive” algorithm that makes adjustments to the turn-off time, in order to achieve maximum efficiency and avoid cross-conduction at the same time. The SP6035 is capable to adapt in almost all existing Resonance converters with no adjustment required.

FEATURES

- Offers efficiency improvement over Schottky Diode.
